## **Acknowledgements**

The editors and the conference organizers acknowledge the support towards the publication of the Book of Abstracts and, particularly, the organisation of the Research Summit 2024 to the following organizations and individualities:

- Universidade de Aveiro (UA), Portugal;
- Fundação para a Ciência e a Tecnologia (FCT), Ministério da Educação e Ciência, através do Fundo de Apoio à Comunidade Científica (FACC);
- Research units of the University of Aveiro, Aveiro, Portugal;
- All heads of the doctoral programs of the University of Aveiro;
- The research office, in particularly Vera Fernandes, Luísa Fernandes, Miguel Conceição, Jacinta Oliveira e Diana Oliveira;
- The Doctoral School, particularly to Emília Castro;
- All students that helped technically in the sessions;
- All students representing each doctoral program for their help promoting the event;
- All SCIRP staff;
- All everyone that, directly or indirectly, helped in the preparation or during the event.

## Preface

The Research Summit 2024 took place from July 16-19 under the theme “50 Years of Research at the UA: Challenges for the Future”. This forum aimed to foster important debates among the University of Aveiro’s research community, increase collaboration, advance the state of the art, and boost research efforts on campus. This year, discussions also focused on the future of the UA. The objectives of Research Summit 2024 were:

- To strengthen networking among faculty members, researchers, and students on campus, developing sustainable research partnerships for more efficient use of infrastructure, sharing of know-how, and contacts;
- To reflect on the past 50 years and discuss the future challenges for the research of the institution;
- To showcase the research carried out at the Research Units;
- To provide PhD students the opportunity to present their work, encouraging them to improve their communication and networking skills.

The Research Summit 2024 was organized differently at this year, with one extra day being added to the general programme. Regarding the structure, 6 UA commissioners were responsible for 6 topics (Materials and Energy, Information, Communication and Microelectronics, Environment and Ocean, Health and Society, Music and Digital Cultures & Education for the XXI Century) to be discussed by international and national experts. The research units coordinators also demonstrated in a pitch how the Unit has contributed to promoting inter, trans, and multidisciplinary research approaches, projecting the future of the unit along these lines. On the following 2 days, presentations by PhD students, as well as first and second cycle students involved in extracurricular research activities, took place, with more training provided to Ph.D. students and a “Best communication Award” in the end of the Summit. We thank the participants for their participation.

This Book of Abstracts and Proceedings, of the Research Summit 2024, is the result of remarkable contributions from young scientists and PhD students working on the topics of the Doctoral Programmes of the University of Aveiro. Although the Research Summit 2024 is aimed at young researchers, senior researchers have also contributed to the success of the conference through their contributions, fostering discussion and collaboration in the research papers included in the book of abstracts and proceedings. The presence of senior scientists and PhD supervisors was very fruitful for all participants and it is hoped that young researchers and PhD students benefited from this experience.

The organisers hope that this Research Summit 2024 was a remarkable opportunity for a fruitful exchange of ideas between the participants and a milestone in the history of the Forums at the University of Aveiro.

**Abstract.** To achieve an effective sustainability, it is important to create strategies or activities that surpass mere awareness-raising efforts (Wiek, et al., 2011; Redman & Wiek, 2021). These activities are important, but we need to understand their impact to make changes for sustainable development (Annelin & Boström, 2022). This paper outlines a questionnaire on the impact of EduCITY games and activities (<https://educity.web.ua.pt/>) in Education for Sustainability. It summarizes the extensive research process of questionnaire development, which involved stages like mapping existing instruments (Reichmann, et al., 2021), reviewing Sustainability Education assessment instruments (Annelin & Boström, 2022), and choosing GreenComp (Bianchi, et al., 2022), the European sustainability competence framework as base for the new questionnaire. This questionnaire has been developed within the specific context of EduCITY games and activities and can be used in other educational and training contexts. Moreover, this instrument has been adapted for use with the Portuguese population. This paper presents the process of developing this questionnaire, demonstrating the various stages involved in its development (Reichmann, et al., 2021; Creswell & Creswell, 2023). These include the collaboration of various national experts, the implementation of different pilots, the application of an initial version, and the subsequent validation process by international experts. The subsequent stages of questionnaire development involved a process of content analysis, including the examination of the content of the used statements and the use of software (JASP team, 2018) designed for the validation of this type of research instrument. These processes showed that the questionnaire was valid (Reichmann, et al., 2021; Creswell & Creswell, 2023). Regarding the reliability of the instrument, it is recommended that further research be conducted by applying the questionnaire to a larger number of participants. It would also be beneficial to apply the questionnaire in a longitudinal logic, rather than in a one-off study (Reichmann, et al., 2021). This would facilitate a more comprehensive understanding of the instrument's value and the activities it evaluates.
